## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 24-27 are rejected under 35 U.S.C. 102(e) as being anticipated by Brock et al (6,886,106).

As shown in figures 1 and 2, Brock teaches an apparatus and method for adjusting the duty cycle of the sampling clock signal to the duty-cycle of the input signal based on the plurality of the edge values. See also column 1, line 66 to column 2, line 21 and column 3, line 13 to column 5, line 60.

### ***Allowable Subject Matter***

3. Claims 1-23 are allowed over prior art of record.

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References Dadvissou et al (6,525,520) and Kizer et al (US 2005/0206419) are cited because they are pertinent to the method and apparatus for

correcting duty-cycle. However, none of the cited references teaches or suggests, in combination, the arrangement of the first and second samplers and the duty-cycle correction logic as recited in claims 1, 8, 14, and 21-23 and further limitations of the dependent claims 2-7, 9-23, and 15-20.
